

South Central Iowa Community Action Program Comprehensive Community Needs Assessment Executive Summary – January 2021

The purpose of this document is to provide current and accurate information to the SCICAP Board of Directors, Management Team, and Planning and Evaluation Committee. This allows the agency to make the most informed strategic decisions possible regarding CSBG (Community Service Block Grant) funding as well as other agency resources. CSBG funds must contribute to the achievement of one or more of the three Community Action goals:

- Individuals and families with low incomes are stable and achieve economic security
- Communities where people with low incomes live are healthy and offer economic opportunity
- People with low incomes are engaged and active in building opportunities in communities

This report is intended to act as a “blueprint” that demonstrates the linkages between community needs and the programs and services that are offered in our five-county service area.

Service Area

Five counties in South Central Iowa: Clarke, Decatur, Lucas, Monroe, and Wayne and provides the Parents as Teacher’s Program in Appanoose and Davis counties.

Approach

As part of the South Central Iowa Community Action Program’s overall Community Needs Assessment, we incorporated data from a 2020 Client Needs Assessment (which included customer satisfaction data), a 2017 Community Stakeholders Assessment, The Community Action Partnership’s Community Assessment Tool (completed January 2021), and the U.S. Census Bureau, American Community Survey (data from 2014-2018). The information we obtained assists SCICAP in identifying:

- Program design and options
- Areas of need
- Priorities
- Gaps in service
- Emerging trends that may affect programming

SCICAP uses the Community Needs Assessment results, along with our Mission to design all programs and services to meet the needs of low-income families and individuals.

Mission

SCICAP empowers individuals and families with services to become self-sufficient and contribute positively to their communities. *(4-28-2021)*

Iowa Community Action Agencies Client Needs Assessment Results (2020)

The client needs assessment was distributed throughout the five-county service area online using a SurveyMonkey link, a Survey Monkey QR code or a paper copy. The survey focused on collecting information regarding the needs of low-income individuals and families in SCICAP's service area.

Survey Respondent Demographics

253 SCICAP clients participated in the survey. The most common characteristics among the survey respondents were:

- Female (73.6%)
- Under the age of 55 (40.48%)
- Physically Disabled (27.2%)
- Mental Health issues (34.4%)
- Receiving Food Stamps (49%)
- One- or two-person household (46.24%)
- Receiving Medicaid (75.79%)
- White (92.8%)
- Ethnicity (Not Hispanic, Latino, or Spanish origin) (95.6%)

Conditions of Poverty

The significant client needs that were identified in the data reviewed were issues concerning housing conditions, food and nutrition, being able to meet basic needs, utility costs and transportation. Sixty-five percent of families stated they needed assistance with making their home more efficient. Forty-eight percent stated they needed help making necessary home or property repairs, while twenty-nine percent of those answering stated they could use assistance with obtaining a loan to buy a house.

Causes of Poverty

The main obstacles preventing self-sufficiency for individuals or families are 1) Safe/affordable housing/rent assistance 2) Utility bills/energy efficient housing 3) Food insecurity/nutrition conditions 4) Basic needs 5) Dependable transportation 6) Lack of living wage jobs 7) Lack of education/skills.

Customer Satisfaction

Clients were asked to rate their overall satisfaction of SCICAP programs and employees

- 99.5% stated they had a positive experience when receiving services (20% of the survey respondents did not answer the question)
- 99% stated they were helped in a timely manner (20% of the survey respondents did not answer the question)
- 99.5% stated that staff were friendly and helpful (20% of the survey respondents did not answer the question)
- 90% of clients said they received information about other agency or community services that could help them with their needs (20% of the survey respondents did not answer the question)

Results from the Customer Satisfaction Survey shows the programs that were utilized the most through SCICAP were food and utility assistance programs. Most people completing the survey stated the biggest barrier to not receiving services was from not wanting to ask for help. A large number also stated they were not aware of all services SCICAP offers. The data indicates there is a gap in services around transportation, housing, affordable healthcare and dental care.

Those completing the survey indicated they would like more daycare spots available for kids, centers open more hours, increased funding for programs, occasional weekend hours, increasing income guidelines for services, increase awareness of available services and rent assistance.

Areas that people surveyed would like to see improved in their communities include transportation assistance, housing, employment opportunities, city government, junk cleaned up, legal aid assistance, adequate daycare and adequate child/youth activities, road maintenance, affordable groceries, speed limits, less drugs, taxes, crime, recreation centers for youth, homeless shelters, animal control, sidewalks, better wheelchair access at businesses, eliminate cop harassment, life skills classes, more street lights and signs, walking/bike trails, police patrolling, and more doctors.

Iowa Community Action Agencies Needs Assessment-Community Stakeholders Results (2017)

Respondents were from a variety of stakeholder groups including community-based organizations, private business or corporation, educational institutions, local government, health care providers and faith-based groups in our five-county area. The survey focused on collecting information regarding the perceived needs of low-income people from community stakeholders.

Survey Respondent Demographics

102 Community Stakeholders participated in the survey; most of the respondents were educational institutions (20.91%) and local government (19.09%).

Conditions of Poverty

Survey respondents indicated there are insufficient opportunities to obtain a living wage, jobs are not available, people lack educational requirements/technical skills, substance abuse, lack of childcare programs during weekends and evenings, lack of affordable child and youth activities and lack of transportation.

Causes of Poverty

Stakeholders felt substance abuse was one of the greatest challenges facing low-income families or individuals which in turn is a main reason they are not achieving self-sufficiency. Stakeholders stated there was not enough public transportation available. Other areas of concern in the Stakeholder Survey were inadequate levels of wellness programs as well as lack of dental services in the area. One of the greatest challenges facing low-income families and individuals is housing and assistance with home energy and utility costs. It was also identified as a need for seniors to remain in their homes. They may need assistance with home repairs, energy and utility costs, yard work and snow removal. When stakeholders were asked what they believe to be the causes of poverty, an overwhelming majority stated there was a lack of employment opportunities, lack of job skills and lack of education.

Stakeholders were also asked what community improvement initiative they would like their community to address. Nearly half of the people surveyed stated that the communities needed new businesses and industry for employment growth. Many stakeholders also stated that more mental health and substance abuse services were needed in the area. Stakeholders were asked what community issue they would like solved if money was not an issue. Again, many stakeholders identified more mental health and substance abuse services. Stakeholders also felt that incentive programs should be developed to encourage industries to move into the area and work programs needed implemented.

Community Satisfaction

Community Stakeholders were asked to rate SCICAP on several factors on a scale of 1-5, 1 being poor, 3 being fine/adequate, and 5 being excellent.

1. Relationship or partnership with SCICAP within the community
 - 98% of the Stakeholders rated between a three and a five
2. How familiar they were with SCICAP's programs and services
 - 90% of the Stakeholders rated between a three and a five
3. How well SCICAP is valued in the community
 - 90% of the Stakeholders rated between a three and a five
4. How well is SCICAP meeting the needs of low-income people in the community
 - 92% of the Stakeholders rated between a three and a five
5. Our staff were friendly and helpful
 - 100% of Stakeholders who connected with SCICAP within the past 12 months rated us between a three and a five
6. SCICAP conducted business in a professional manner
 - 95.55% of Stakeholders who connected with SCICAP within the past 12 months rated us between a three and a five
7. SCICAP staff had a thorough knowledge of our agency programs and services
 - 100% of Stakeholders who connected with SCICAP within the past 12 months rated us between a three and a five

Community Demographics:

(Community Action Partnership Community Needs Assessment and US Census data 2021)

Population Profile:

Overall, the SCICAP service area has seen a -4.27% change in population from 2000-2018 according to the US Census/American Community Survey. The total population decreased in all counties except for Clarke. Clarke County had the largest growth with 1.63%. Lucas County had the largest decline of -8.76%.

Report Area	Total Population, 2018 ACS	Total Population, 2000 Census	Population Change from 2000-2018 Census/ACS	Percent Change from 2000-2018 Census/ACS

201% to 250%	0.73%
Over 250%	0.75%

Information gathered from the CSBG FY2020 annual report specific to the agency client information states over fifty-eight percent of the clients served last year were at 100% of poverty or less. Fifty-five percent were female and forty-five male. The families that were served and reported on constitute all the SCICAP programs except some clients of Parents as Teachers and FaDSS.

Of the people served by SCICAP, thirty-five percent were ages 0-17, thirty-six percent were ages 18-54 and twenty-nine percent were over age 55. The Hispanic population constitutes four percent of the population with ninety-six percent reported being non-Hispanic or Latino. Ninety-five percent of the client population indicated White as their race; fifty people, or less than one percent, indicated Black or African American as their race; fourteen people indicated American Indian or Alaskan Native; eight people indicated Asian and two people indicated Native Hawaiian or Pacific Islander. Almost one and a half percent of the people indicated multi-race or other as their race.

Other characteristics worth noting are:

- 4,497 people or 91.79% had health insurance
- 1839 people or 37.54% reported having a disabling condition
- 167 people or 3.41% were veterans
- 12% of the clients served were from single parent households with the female being the head of household in 10.54% of the homes
- 16.66% of households were 2 parent households
- 923 people or 43% of people served were single
- 16.52% of the people served were two adults with no children
- 51.95% of the people served owned their home, 47.25% were renters, and .19% were homeless

Other data relevant to determining needs of the SCICAP service were indicated in the Community Action Partnership's Community Needs Assessment Tool.

Summary of Findings

This Comprehensive Needs Assessment contains an assortment of data. The Community Needs Assessment should go beyond just collecting information and analyzing data; it can be the foundation for creating change. This assessment provides a glimpse of the communities and families that SCICAP serves, which includes their economic well-being, educational status, health, and welfare. This assessment will be a tool to assist SCICAP with its planning process to help govern what programs and services to offer and the influence it is having on families as well as the community. Developing partnerships in the community is the most effective tool in the fight against poverty. Outreach efforts and communication with residents and other community service providers is necessary to warrant that everyone has up-to-date information and access to programs and services. This report validates how important social services and community assistance are to low-income families in helping them deal with poverty.

Main Conditions of Poverty

Basic needs are not being met

- Housing conditions/utility costs
- Food insecurity/household supplies
- Healthcare

Basic Needs

- Housing conditions/utility costs: There is an insufficient number of affordable, quality housing units accessible for low-income families. Families with low incomes also need help paying deposits, rent, utility bills and making their homes more energy efficient. Several stated they needed help making necessary home or property repairs. Rent prices are unreasonable for minimum wage earners. Low-income families need assistance with obtaining a loan to buy a house.
- Food insecurity/household supplies: Families stated they could use help getting food from food pantries, meal sites, or food shelves. Survey participants specified that having enough food and household supplies is a barrier for low-income families and individuals. Populations receiving food assistance represent vulnerable populations which are more likely to have multiple health and social support needs. Food insecurity is a problem that requires various approaches to address, from emergency assistance to ongoing food support. Effective programs include WIC, SNAP, school lunch programs, and food pantries. Acquiring basic household supplies such as personal hygiene items, cleaning supplies, laundry soap, clothing, furniture, and appliances is also a strain.
- Healthcare: Families and individuals do not have access to affordable healthcare. The lack of financial resources is a barrier to basic health services.

Causes of Poverty (why the need exists)

- Lack of affordable housing/rent assistance
- Lack of education/skills
- Lack of living wage jobs
- Lack of affordable childcare
- Lack of dependable transportation
- Substance abuse

Housing

There is an insufficient number of affordable, quality housing units accessible for low-income families. Families with low incomes cannot afford rent/house payments and utilities. Data indicates that a large percentage of owner and renter occupied housing units have conditions that identify the homes as being substandard. Conditions that contribute to being deemed substandard include lacking complete plumbing fixtures, lacking complete kitchen facilities, selected monthly owner costs as a percentage of household income greater than thirty percent.

Education

The lack of a high school diploma/HiSet or further education will influence the future earning potential and financial stability of individuals and families for generations. Early education programs play a substantial part in providing children with the necessary skills, training, and early interventions they need. Educational achievement is fundamental to the economic health of the communities we serve.

Living Wage Jobs

The surveys indicate there is a gap between available jobs and the community resident's skill level. Based upon the data, people do not have the skills required to qualify for jobs in today's market. Additional skill training and education are needed to obtain a living wage job.

Childcare

There are not enough adequate childcare programs as well as childcare financial assistance. Survey respondents indicated there are an insufficient number of evening and weekend options available for childcare. There is also a lack of child and youth activities or after school programs available. Childcare is an essential workforce support that reduces absenteeism and turnover for working parents.

Transportation

Transportation appears to be a need with a large percentage of people identifying a need for help with getting financial assistance to purchase a car, repair a vehicle, getting to and from appointments, and getting vehicle insurance.

Substance Abuse

Substance abuse is a complicated issue that prevents many people from obtaining and retaining employment, stable home environments, housing, and in general self-sufficiency. Many times, people choose to fund their addiction rather than providing the essentials for their families. Substance abuse has a direct impact on the communities in which people live.

Summary of Customer Satisfaction

Overall customer satisfaction results are exceptionally positive. SCICAP appears to be doing an outstanding job providing essential services and programs to low-income clients in a helpful and friendly manner. 99.5% of survey participants stated they had a positive experience when receiving services. Most people completing the survey stated the biggest barrier to not receiving services was from not wanting to ask for help. Over 95% of Stakeholders gave SCICAP high ratings for value, professionalism, and relationships with community partners.

Summary of Community/Client Demographics

The assessment of the client and community demographics reaffirms what we already knew about the population and counties we serve.

- Population is decreasing
- Decatur County has the highest poverty rate in the state
- The SCICAP service area has a higher poverty rate than the state average
- Median household income is much lower than the state average
- We have clients that lack higher education
- We have many children receiving free or reduced-price lunches
- We have clients living in unsafe and unsanitary homes
- The percent lacking adult literacy skills for Iowa is 7%, and 9.08% for SCICAP's service area

A noteworthy barrier to self-sufficiency is the gap between wages and the cost of living. The high cost of housing, shortage of childcare options, and lack of transportation make access to employment, childcare, and social services costly and challenging. South Central Iowa Community Action Program provides quality programs and collaborates with other organizations in order to pledge the best possible support and outcomes for the families we serve. We collaborate with state agencies, local governments, schools, non-profits, medical and mental health providers, utilities, local businesses, and faith-based organizations. Our greatest advantage in meeting the challenges we face and developing opportunities for our clients is the resilience of our community members, staff and partners. While SCICAP is not able to meet every need identified in the surveys, the Agency has services and referral options in place to tackle many of the issues that clients are facing in our communities.
